WILLS'S CIGARETTES

Modern Submarine.

The first Submarine to actually go into action was built by David Bushnell in 1776. In 1880-7 several submarine boats were built, which, however, proved unstable when submerged. In 1891 the *Gustave Zédé* was built, displacing 266 tons, and having a speed of eight knots when submerged. The modern submarine has a displacement of nearly 1,000 tons, and a submerged speed of over 10 knots.
